SHELT

YOUR CYBERSECURITY
AS-A-SERVICE PARTNER

Who Are We?

SHELT is a European Cybersecurity enterprise for the new digital world, with presence in Europe, Middle East and on the African Continent.

A culmination of years of experience from several partners that are all leaders in their respective fields; ranging from Telecommunication Network providers, Managed Services to Cyber Security service providers.

Product Catalog

Managed Next Gen SOC

Brand & VIP Protection

Information Security Services

Unified API Security

EDR & XDR

Fortinet Stack

MANAGED SOC

SHELT

YOUR CYBERSECURITY
AS-A-SERVICE PARTNER

Managed Next Generation SOC

SOC Building Blocks

People

24/7 Service

- Highly Skilled Professionals With Deep Knowledge In Security & Event Monitoring & Incident Response
- On-demand Security Experts Available for Critical Investigations

L1 SUPPORT

Event & Alert Monitoring

- Security Incident & Event Detection
- Event Analysis & Prioritization
- False Positive Reduction
- Notification of Qualified Events to Clients

L2 SUPPORT

Incident Response Support

- Event Advanced Analysis & Verification
- Triage & Investigation Support
- Troubleshoot the Interruptions in Log Collection
- Define Reporting Templates, Dashboards, Queries

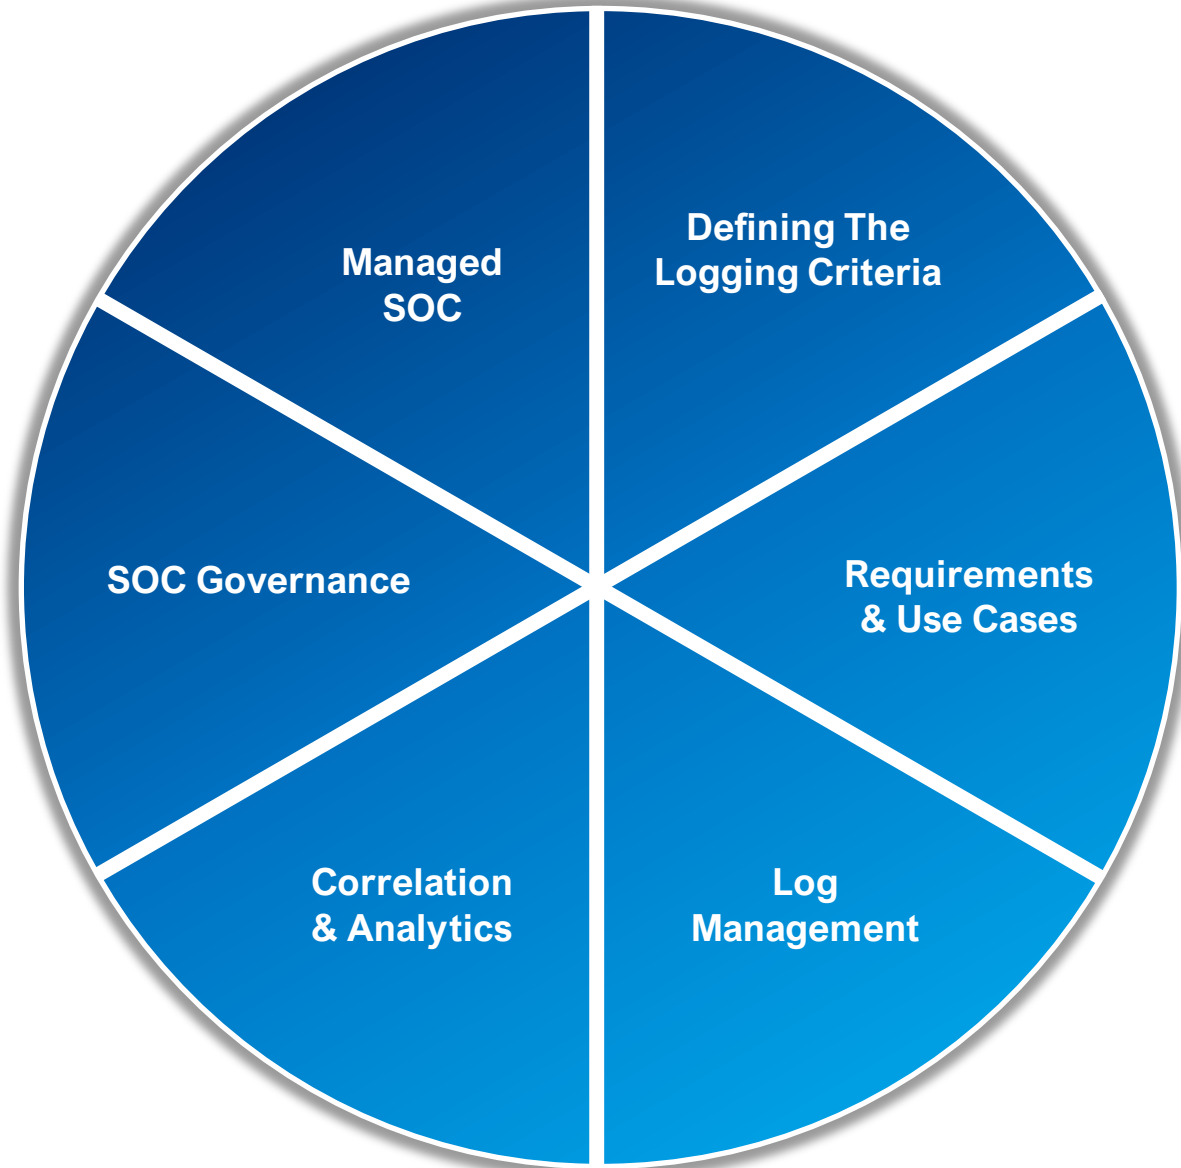

L3 SUPPORT

Platform Management

- Health & Performance Monitoring
- Change/Configuration Mgt
- Patch & Content Updates
- User Account & Access Mgt
- Fine Tuning of Existing Rules
- SLA Tracking

API Protection Maturity Model

Cequence AI – Unified API Security

API Security Pillars

Sequence Deployment Options

	SaaS	On-Premises	Hybrid
Deployed as	Dedicated single tenant	Microservices application	Microservices application + Network sensors or proxy
Hosted in	Sequence hosted	Customer's environment	Sequence hosted + Customer's environment
Time to deploy	 15 mins	 1-2 hours	 1-2 hours
Data security/ privacy	PCI, SOC2, ISO certified	100% privacy <i>Data remains in customer's environment</i>	PCI, SOC2, ISO certified
Latency	Avg ~25 ms	0 - 5 ms	0-5 ms
Inline / passive	 Passive  Inline	 Passive  Inline	 Passive  Inline

GRAVITYZONE PLATFORM

ENDPOINT | CLOUD | NETWORK | MOBILE | IDENTITY | PRODUCTIVITY | IOT DEVICES

GravityZone XDR Sensors

Identity Sensor

- Monitor, analyze, respond to events from AD, Azure AD
- Detects compromised accounts, Kerberos attacks, Brute Force and others. XDR responses include password reset or disabling accounts involved in suspicious activity

Network Sensor

- Monitor, analyze network traffic for signs of an attack
- Identifies lateral movement across the network, exfiltration, port scanning techniques, network originated Brute Force attacks

Productivity App Sensor

- Monitor, analyze, respond to O365, G Workspace events
- Detects disabled phishing protection, user creation, suspicious macros, spear phishing, exfiltration, Brute Force.
- Responses: delete suspicious emails, suspend accounts

Cloud Sensor

- Monitor, analyze security events from AWS, Azure, GCP
- Builds behavior baselines, reveals anomalies, use of Lambda function, encryption removal, monitoring services removal, reconnaissance, login failures, etc.

The Fortinet logo is displayed in a white, stylized, sans-serif font. The letters are bold and have a modern, geometric feel. The background is a dark blue gradient with abstract, wavy, light blue line patterns in the top right and bottom left corners.

SHELT

YOUR CYBERSECURITY
AS-A-SERVICE PARTNER

SOC Toolkit

FortiSIEM

FortiSOAR

Centralize, standardize & automate
IT/OT security operations

Connect anything – automate everything

500+ integrations, 800+ playbooks, robust use-case solutions for SOC/NOC/OT

Security incident response

Automated triage, enrichment, investigation, case mgmt, collaboration, and response actions

Threat Intelligence management

Powered by FortiGuard Labs and any public source

Asset and vulnerability mgmt

IT/OT risk-based tracking and remediation playbooks

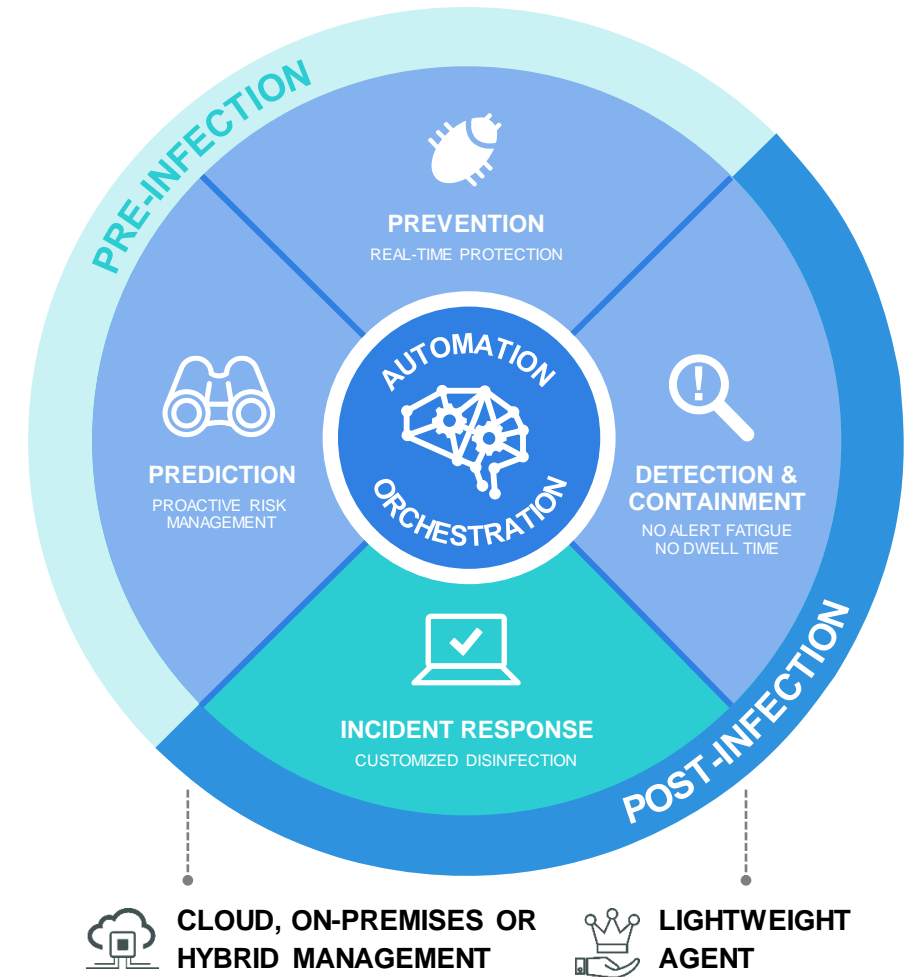

No/low-code playbook creation

Patented development modes for any user and workflow

FortiEDR

- Unified agent by design
- ML and Behavior-based protection
- Continuous classification by cloud-based AI
- Support for legacy OSes and hybrid environments
- Low TCO
- Lightweight agent
- Secure remote remediation
- Tamper-proof & evasion resistant
- Strong third-party results
- Managed options available

Faster Detection

- AI / ML models designed to detect anomalous and malicious activity
- Virtual, human, and behavioral analysis reduces false positives
- Detections mapped to MITRE ATT&CK framework

Orchestrated Response

- Integrates with Fortinet Security Fabric and SOAR, SIEM and XDR tools to automate response

Improved Threat Hunting Capabilities

- 365-day network metadata retention
- Proactive investigation tools
- Guided playbooks for hunting efficiency
